Science Conference

US 2025

16–19 March

Renaissance Orlando at SeaWorld Florida

Introducing TFL Viewer: Centralized Platform for TFL Review, Collaboration, and Approval

Paper & Presentation # SD09,

PHUSE US Connect 2025

March 18th, 2025

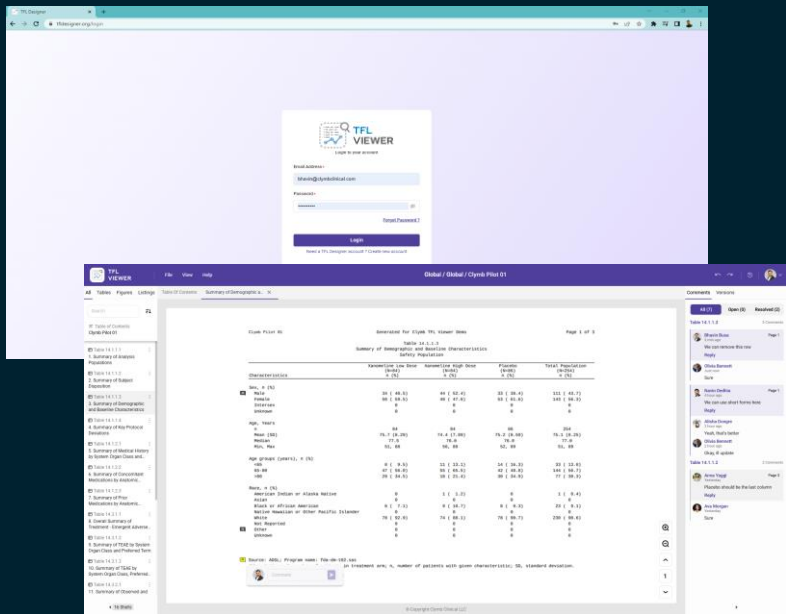

Bhavin Busa, Principal & Co-Founder, Clymb Clinical

The Problem: Inefficient and Fragmented TFL Review Process

- Disorganized Feedback & Review Cycles
- Navigating Hundreds of RTF/PDF Files
- Lack of Collaboration & Transparency
- Cumbersome Submission Process
- Limited Version Control & Quality Checks

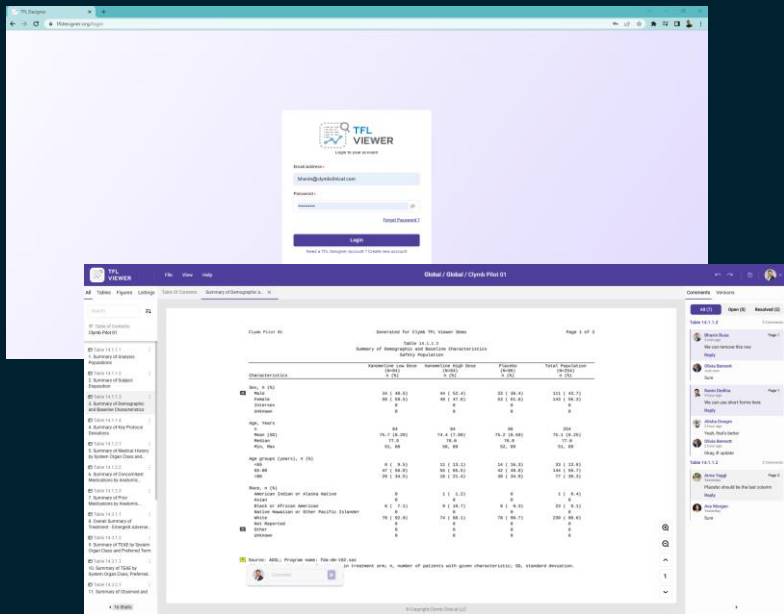

We aim to solve these issues by centralizing, automating, and streamlining the TFL review process!

What is TFL Viewer?

TFL Viewer is a web-based platform designed to streamline the review, feedback, and approval process for tables, figures, and listings (TFLs) generated during clinical trials.

Technology Stack Used

■ Built by Software Engineers using:

- **React JS** – Frontend framework for a seamless user experience
- **Python** – Backend development for efficient data processing
- **No SQL Database (MongoDB)** – Flexible and scalable data storage
- **Git** – Version control for tracking code changes and collaboration

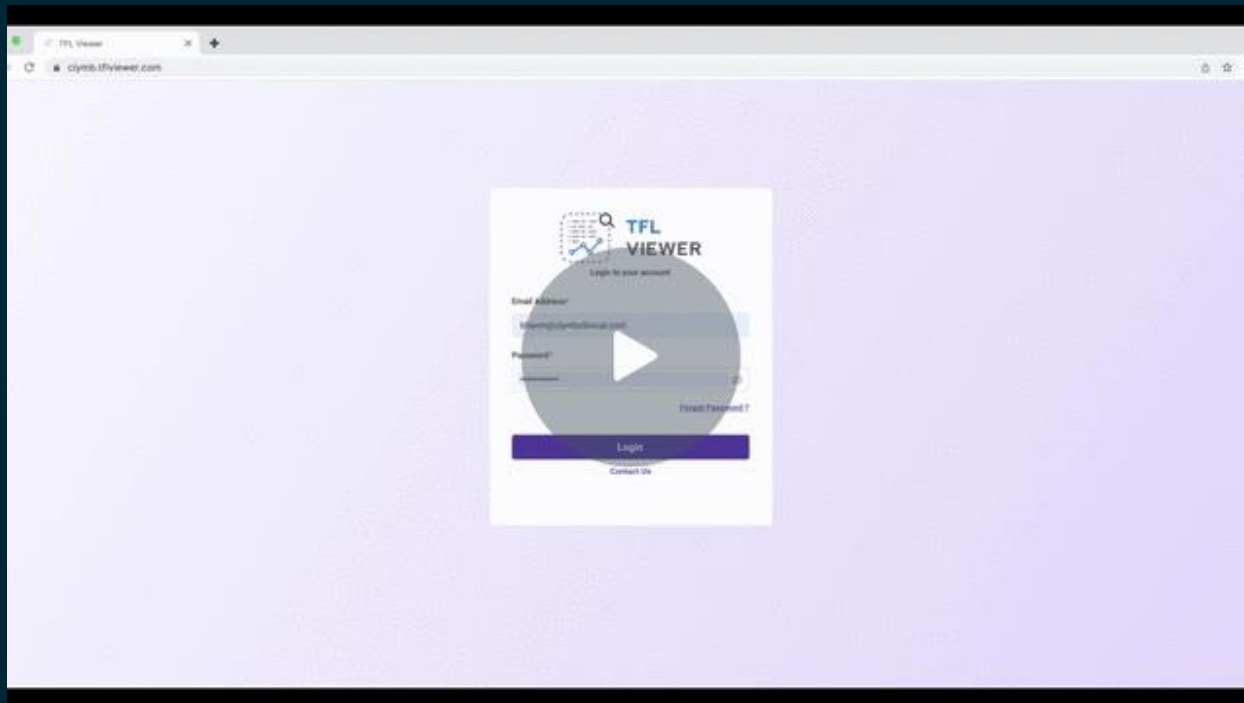

Key Functionalities

- *Secure cloud-based scalable solution*
- *Central repository for all your TFLs*
- *Import TFLs in RTF & PDF formats
[ARD in JSON format in near future]*
- *Access control and audit trail*
- *Version control and comparison*
- *Intelligent navigation*
- *Real-time collaboration & feedback*
- *Export functionality in RTF & PDF
formats [JSON in near future]*
- *Early Top-Line Review*
- *Integration Capabilities*

AI-powered Enhancements: Future add-ons will incorporate AI-based content generation for statistical reports and Clinical Study Reports (CSR) sections.
